

SAERA Biosecurity Guidelines

Prior to attending any endurance/training ride in South Australia:

All horses from QLD and NSW within 250km of any known Hendra outbreak must have had their final Hendra vaccination on or before 21 day period prior to arriving at ride base, and must be able to provide a microchip number and vaccination certificate. Horses which have been previously vaccinated, must have maintained the current recommendation for booster shots. Other unvaccinated horses travelling from any other part of QLD and NSW must complete a 7 day temperature log to be presented on arrival.

Local horses wishing to compete at SAERA rides must be isolated from any horse originating from a Hendra hot spot (250km from a reported outbreak) for a period of 28 days, separated by a minimum distance of 10m at all times, with no sharing of feed or water receptacles.

ANY unvaccinated horses that have travelled into or from Hendra hot spots within 28 days prior to an event will not be allowed on the grounds.
